

CONCRETE TILES AND STONE

concrete tiles and stones, mostly used for construction, and also most of the reuse of them was constructed for using as a cover of a road or using metal wire web for making structure out of stone and small piece of concrete tile, these structures are working very well even for putting a beam on it and build up the ceiling. For road also work very well, and make the comfortable road for walking on the muddy ground in garden or playground and etc.

TIRE

Tires are one of the most useful household waste material. They used in lots of different categories, from accessories until architectural project.
I chose some of the examples of a way of using their in different scale. Tires are very useful for make road, stairs, wall, furniture and etc.
